

Tangent Ratio

Tuesday, January 28, 2020 11:18 AM

$$\frac{6}{8} = \frac{3}{4} = \frac{9}{12}$$

In similar Δ 's corresponding angles are equal and corresponding sides are proportional (i.e. same scale factor (larger or smaller))

Tangent ratio

$$\text{Tangent } \angle A = \frac{\text{opposite side}}{\text{adjacent side}}$$

$$\text{Find Tan } A = \frac{\text{opp}}{\text{adj}} = \frac{12}{7} = 1.7143$$

What is the Tan $40^\circ = 0.8391$

Tan⁻¹

$$\tan A = .75 \quad \angle A = \tan^{-1}.75$$

$$\angle A = 36.9^\circ$$

Use the Tan button when you know the angle + want the ratio.

Use the \tan^{-1} button when you know the ratio + want the angle.

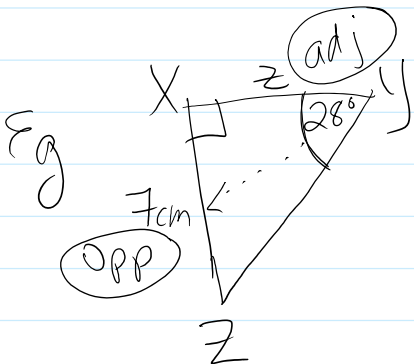

Find $\tan A = \frac{10}{13} = .7692$
 $\tan B = \frac{13}{10} = 1.3$

"measure of" $m\angle A = \tan^{-1}(.7692) = 37.6^\circ$
 $m\angle B = \tan^{-1}(1.3) = \underline{\underline{52.4^\circ}}$

θ theta } greek letters
 α alpha }
 β beta }

Find side z (XY)

$$\tan A = \frac{\text{opp}}{\text{adj}}$$

$$\tan 28^\circ = \frac{7}{z}$$

~~$$\frac{z}{3} = \frac{4}{6}$$~~

~~$$\frac{z}{3} = \frac{x}{6}$$~~

$$z = \frac{7}{\tan 28^\circ}$$

$$x = \frac{2 \times 6}{3}$$

$$z = 13.2 \text{ cm}$$

Find side a.

$$\tan A = \frac{\text{opp}}{\text{adj}}$$

$$\tan A = \frac{\text{opp}}{\text{adj}}$$

$$\tan 42^\circ = \frac{a}{12}$$

$$a = 12 \times \tan 42^\circ$$

$$a = 10.8 \text{ cm}$$

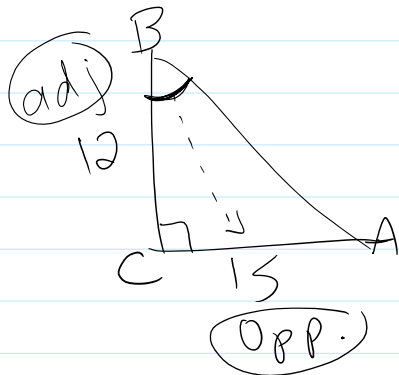

Find side y

$$\tan X = \frac{\text{opp}}{\text{adj}}$$

$$\tan 22^\circ = \frac{14}{y}$$

$$y = \frac{14}{\tan 22^\circ} = 34.7 \text{ cm}$$

Find $\angle B$.

$$\tan B = \frac{\text{opp}}{\text{adj}}$$

$$\tan B = \frac{15}{12} = 1.25$$

$$\angle B = \tan^{-1}(1.25)$$

$$\angle B = 51^\circ$$
